

Executive Summary

This proposal outlines the development of an AI-powered helpdesk system to address the client's need

Project Overview

{'Problem Statement': 'The client needs an efficient system to classify support tickets and retrieve

Scope of Work

{'In Scope': ['Development of an AI-powered module for support ticket classification.', 'Development

Technical Approach

Our approach will involve developing an intelligent helpdesk system built upon robust Natural Language

1. **Data Preparation & Engineering:** Clean, preprocess, and prepare historical support ticket data
2. **AI-powered Ticket Classification:** We will develop and train a sophisticated NLP model, likely
3. **AI-powered Answer Retrieval:** A semantic search system will be implemented to understand ticket
4. **Helpdesk System Interface:** A modern, responsive web application will be developed using a
5. **Backend Services:** A robust backend will be constructed using Python (FastAPI, Django, or Flask)
6. **Integrations:** Seamless integration with the client's existing Knowledge Base will be achieved
7. **Deployment & DevOps:** The entire solution will be containerized with Docker, orchestrated via

Deliverables

['Comprehensive Project Plan, including functional and technical specifications.', 'Data Ingestion and

Project Timeline

{'Phase 1: Discovery & Planning (4 Weeks)': 'Detailed requirements gathering, data audit, system architecture

Team Structure

['Project Manager (1): Oversees project planning, execution, monitoring, and client communication.',

Assumptions

[{'id': 'A1', 'description': 'Sufficient volume, diversity, and quality of historical support ticket data

Risks and Mitigation

[{'id': 'R1', 'description': 'Insufficient volume, quality, or consistency of historical support ticket data

Previous Experience

Our team possesses extensive experience in developing and deploying AI-powered solutions, particularly

Pricing Estimate

{'architecture_hours': 60, 'design_hours': 80, 'development_hours': 600, 'testing_hours': 160, 'total_hours': 800}

Conclusion

This proposal outlines our comprehensive approach to developing an AI-powered helpdesk system designed
