

Dear Hiring Manager,

I am a Computer Science and Engineering student at Lovely Professional University, currently in my fourth semester, and I am writing to express my interest in the Software Engineer Summer Internship at JPMorgan Chase. I am particularly interested in building scalable backend systems and applying modern technologies to solve real-world problems.

Through my academic coursework and personal projects, I have developed strong programming and software engineering skills in Python, C++, and backend frameworks such as FastAPI and Django. One of my key projects involved designing and deploying a Retrieval-Augmented Generation (RAG) system using Qdrant, FastAPI, and Gemini APIs. This project allowed me to gain hands-on experience with vector databases, API development, and deploying production-ready services.

I am excited about the opportunity to learn from JPMorgan Chase's technology teams and contribute to building reliable and scalable systems that support global financial services. I believe that my technical background, problem-solving mindset, and passion for building practical software solutions would allow me to contribute effectively while continuing to grow as an engineer.

Thank you for considering my application. I would welcome the opportunity to further discuss how my skills and experiences align with the goals of your engineering team.

Sincerely,
Soham Sharma
